## Good News

1. Managers of natural resource issues in Colorado are improving their respect for uncertainty. http://www.circleofblue.org/2016/water-management/deep-uncertainty/

## Additional Ideas

1. Anytime something is banned; somebody is going to cheat the system. If that economic benefit from cheating is high then there lies the danger of training citizens to cheat the system to get advantage.
2. Can we manage "Deception of Purpose". Those moments where Government sucks so bad at accomplishing something it's probably just lying about the stated purpose. For example:
    a. Giving IMF loan to Indonesia will dramatic increase it's productivity so it will be able to pay back debt.
        i. Turns out the hydro damn completely fails to meet productivity so now Indonesia is controlled through debt by IMF nations.
3. Do a Kickstarter to help the government of D.R. Congo: Go Google.
    a. Make a dashboard of stakeholders.
    b. Which companies will feel threatened by market share changes.
    c. Create a Branded version of Government. Get a design patent on a method of government.
        i. Can I charge licensing fees for governance strategies?
        ii. Can I charge a franchising fee.

Humans evolved for groups of 150 to 200.

## Pruned Content

1. Threat is a person or a group of persons with intent to harm.
2. Faulty products are a very different type of risk.
3. Risk is more broadly defined. Driving drunk creates risk of harm, but is not considered taking action with intent to harm.
4. Why is speeding fined or illegal if speeding itself doesn't hurt people? Hitting people with your car is already illegal
5. Allowing people to drive at all creates risk of harm. It's possible to damage life and property at 20 mph.
6. Highest order component is Voluntary whatever the Individual is involved in is Voluntary.
    1. You can opt out of a school.
    2. You can opt out of a family.
    3. You can opt out of a company.
    4. You can opt out of any organization.
    5. Opt out of the military.

    Things that used to be difficult to opt out of.
    1. Gender
    2. Career.
    3. Genetic makeup.
    4. Social status.
    5. Reality itself: soon people will be able to escape to any VR with as much vivid detail as Reality.

    Things that are still impossible to opt out of.
    1. The progression of time.
    2. Nearly impossible to opt out of Earth.

### Insights from Singularity is Near

Traditional controversies like mass snooping to keep make systems secure vs. right to privacy will not even apply to such a s

EPI Briefing Paper
and several other trends2

## Insights from Black Swan

Point: upgrading experts to think outside the normal distribution curve is proving difficult. Government is not prepared for the increasing pace of Black Swans that can have devastating consequences.
Ex. The 2008 melt down reversed 50 years of economic progress. (find direct quote).

## War on Drugs

Most likely this is an intentional failure to help fund projects that the US government can't fund through transparent means.
(Iran Contra Scandal)

### Marriage and Sex Reform

Many more battles will crop up across a spectrum of social topics. To avoid an increasingly cumbersome and oppressive government, empowering the private sector to set up incentives and deterrents for different kinds of behavior must remain a priority.

### Heathcare Reform

Drawback to the plan is that customers are still somewhat detached from the cost of the healthcare provided so there isn't the standard free market pressure to improve prices. Instead, pricing will get determined between insurers and providers.

## Election Reform

Some of the easiest return on investment the U.S. has available is Election Reform. To future-proof government eliminate, a massive cost to freedom, without incurring any harm to self or others, is to include every citizen of voting age without exception. The most frequent disenfranchisement is people in prison and convicted felons. Allowing felons and prisoners to vote will pose no harm to other voters. Total inclusion will kill any incentive for any political group to target

another group for prison sentences.
The next clear improvement is to implement remote online voting. Estonia has had online voting since 2005 and has demonstrated increases in voter turnout. (Kristjan, et al 2016) Several publications express concern with different types of security vulnerabilities. However, any remaining security issues must be resolved. Internet has already taken hold any many critical sectors of the economy particularly banking and healthcare. Online voting is yet another critical sector to improve the responsiveness of government.

Stakeholders: Democracy generally improves as inclusion moves towards 100%. Including prisoners and felons will improve accountability to prevent unjust laws. Adding internet voting will help the US move toward even more inclusion.

## Two Party system still fails to meet the expectations of most people.

Approval of Congress is languishing at the bottom of it's rating since Gallup started measuring approval in the 1960's. (Gallup 2016) The recent election between Hillary Clinton and Donald Trump also indicated lack of enthusiasm for the voting process. Hillary Clinton fell short 2 million votes from President Obama's reelection in 2012. (Regan 2016) Third party candidates received enough votes to flip the result in several of the most recent swing states. (Watkins 2016)

## The ScoreCard:

Which dimensions are root nodes and which are leaf nodes on the cause and effect graph that orders the flow of public action and consequences that make government.
With such a large, pervasive, and often vaguely defined concept as government, how do we avoid measuring culture and society while thinking we are measuring the quality of a government?

Cost in terms of Lives, Property
Measuring cost to freedom poses a more abstract challenge. The freedom to take a life is usually banned by government. That freedom costs a life, so government typically values the cost of a human life far more than the freedom to take a life. The obvious exception is when taking a life prevents the loss of another life, e.g. self defense. Generally, if there's a way to avoid the loss of one's own life without committing homicide, the homicide becomes a crime. Cost in inclusion means someone or some group has to be excluded. While the mainstream media and universities r

**Strategy**

## WellBeing

> "We the People of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, **promote the general Welfare**, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America" - US Constitution

## Disruption Fund

At the time of this writing, Donald Trump is negotiating with Apple to manufacture iPhone's in the U.S. Even if this happens so much of the labor will be automated that only one city will likely benefit from the new plant.

## Basic Income

Several different proponents of Basic Income have their own configuration of the principles involved. At what age does it start and end? Does the basic income get taxed upon reaching a certain private income? How much is the grant each month? Several groups critical of the concept worry that it will incentivize people to not work, that it will be too expensive, that people will spend the money on drugs.

## Concluion

Future-proof government will not come easy. The government design proposed in the preceding pages deliberately cater to current political circumstances. The design is a destination. The unfortunate lesson from history is that new governments in the real world rarely mean better governance. Usually some idealogy becomes the central messaging of a new power group. The new power elite suppresses any challenge to its authority in the name of cementing the revolution or coup.

## Inclusion

(Borrowing the term from "Why Nations Fail" ) Inclusive Institutions vs. Extractive Institutions
"It is all about incentives and opportunities," says Acemoğlu.
http://www.huffingtonpost.com/st-gallen-symposium/inclusive-institutions-ke_b_9510688.html

( find a citation for the ones already broken into comparative government indices ). Others on the other hand need further definition or to develop some metric

1. Secure private property. What evidence is there that anyone can own real estate, businesses, mineral rights, rental properties, etc? How to confirm inclusion across the great mass of people is available.
2. Unbiased system of law. That would take lots of court proceedings both in criminal and civil courts to see what biases could be evident.
3. Public services in which people can exchange and contract. This core feature can imply a lot and vary a lot in implementation.
4.

How to score a Government on Inclusion?
(probably too lengthy to make a super strict measurable definition ).

1. Score 100 if everyone regardless of race, economic standing, criminal record, voting record, citizenship can own private property and government always judges correctly on property disputes. A lot of governments still discriminate against non-citizens right to own real estate.

* Deliberatedly neglected: The Off Grid. Amish, Native Americans, People with aluminum foil hats in underground bunkers. By definition these are people that want to be ignored by the system.

*** Not sure if any governments today use this incentive, most commonly observed in Wild West movies.

** Many behaviors can be reduced by simply making it illegal. Most people in society associate illegal actions with being irresponsible or unethical regardless of the real world consequences of those actions.
Taxes are used in many ways as both carrot and stick. You can tax at multiple points in the supply chain or offer various tax incentives (credits, deductions, etc.). Taxation can also have the effect of regulating the price of something, and driving that price much higher if you want to discourage it. That's just the most common methods of using the taxation system to influence behavior, there are many others that are variants on the theme.

Example simplification:

1. If a form of harm costs less than $100 to remedy then the government should not be involved, and private sector should readily.

### Harm and Risk of Harm

How effectively governments respond to Harm and Risk of Harm seems almost impossible to create a consistent way to manage all the possible issues. Product liability for faulty brakes is a quite different harm than speeding in a residential area.

The organic answer is whenever is there is enough fear or paranoia or sense of injustice accumulated in the voting public to push a bill through Congress.

## Unused Research

#The **black swan theory** or **theory of black swan events** is a metaphor that describes an event that comes as a surprise, has a major effect, and is often inappropriately rationalized after the fact with the benefit of hindsight. The term is based on an ancient saying which presumed black swans did not exist, but the saying was rewritten after black swans were discovered in the wild.

The theory was developed by Nassim Nicholas Taleb to explain:

1. The disproportionate role of high-profile, hard-to-predict, and rare events that are beyond the realm of normal expectations in history, science, finance, and technology.
2. The non-computability of the probability of the consequential rare events using scientific methods (owing to the very nature of small probabilities).
3. The psychological biases which blind people, both individually and collectively, to uncertainty and to a rare event's massive role in historical affairs.

#"The human mind is a story processor, not a logic processor."

Haidt, Jonathan (2012-03-13). The Righteous Mind: Why Good People Are Divided by Politics and Religion (p. 328). Knopf Doubleday Publishing Group. Kindle Edition.

#"Because you don't need to spend that time cooking dinner if you already ate at the office, you don't have to run to the dry cleaner if that's taken care of for you. Exactly the things that Google offers its employees (over and above interesting work and good pay) are the things that increase their leisure time by reducing their unpaid working hours.
It's actually feasible that someone working for Google could put in 45 or 50 hours a week and still have more leisure than someone working for a company that doesn't provide those perks but only works 40 hours. Odd but true that is."

https://www.globalpolicy.org/images/pdfs/troubled_waters-complete.pdf

#"THIS BOOK IS about the huge differences in incomes and standards of living that separate the rich countries of the world, such as the United States, Great Britain, and Germany, from the poor, such as those in sub-Saharan Africa, Central America, and South Asia."

Acemoglu, Daron; Robinson, James (2012-03-20). Why Nations Fail: The Origins of Power, Prosperity, and Poverty . The Crown Publishing Group. Kindle Edition.

Both lovers and haters of basic income often miss an important point: We don't have great data on how it would work or what would happen if it did. Similar policies were tested in both Canada and the U.S. in the 1960s and '70s, but studies of their effects were either flawed or abandoned. "To be honest, a full long-term universal basic income has never been tried, let alone rigorously evaluated," said Michael Faye, the co-founder and executive chairman of Give Directly, a nonprofit that has pioneered direct cash transfers to the extreme poor, primarily in Kenya and Uganda.[1] Earlier this month, Faye announced Give Directly's plan to launch a large basic income pilot in Kenya, giving at least 6,000 people a guaranteed income for 10 to 15 years. They hope to find out what happens when everyone in a randomly selected place receives a guaranteed basic income for a long period — something that has never been done before.
http://fivethirtyeight.com/features/universal-basic-income/

#"THIS IS A BOOK ABOUT POWER. Specifically it is about how power— the capacity to get others to do, or to stop doing, something— is undergoing a historic and world-changing transformation. Power is spreading, and long-established, big players are increasingly being challenged by newer and smaller ones. And those who have power are more constrained in the ways they can use it. "

Naim, Moises (2014-03-11). The End of Power (p. 1). Basic Books. Kindle Edition.

#"Emissions trading or cap and trade is a government-mandated, market-based approach to controlling pollution by providing economic incentives for achieving reductions in the emissions of pollutants."
Stavins, Robert N. (November 2001). "Experience with Market-Based Environmental Policy Instruments" (PDF). *Discussion Paper 01-58*. Washington, D.C.: Resources for the Future. Retrieved 2010-05-20. Market-based instruments are regulations that encourage behavior through market signals rather than through explicit directives regarding pollution control levels or methods

#Universal Guaranteed Income

26. There's too much morality too vaguely defined for Government to be the standard bearer of morality. There's a far more clear objective of preventing harm. The simpler notion of preventing harm can accomodate the most healthy parts of most religions. We can replace Libertarian vs Socialistic arguments with clear data about where each policy can dramatically improve the most benefit to the most citizens.

## Trade Reform: Free Trade amongst all Nations that commit to Fair Trade.

Countries that

Tariff Schdedule:

## Drug Reform

Completely decriminalize drugs.  The chief aim of the DEA is to prevent and prosecute fraudulent drugs.
It's still legal to conduct drug screens and use that data to hire and fire employees.  Basically manage all drugs similar to alchohol and add a sin tax account for the portion of society who will likely self destruct.

# Aphorisms

Agriculture is one of the messiest industries; If you can govern the food and agriculture market well, you can probably govern every other industry well.

Do I want to live under this government?

**Design Flaws of Current Government**

## Manufactured Stability causes more Extreme Crashes.  Add this to Black Swan part.

Fighting the business cycle allows inefficiencies in the private sector to build up and, while it delays a short term down turn in the business cycle, it ultimately generates a far worse correction.  Correction is a benign term used to describe lives and marriages torn apart by the death of home values, the decline of local businesses in many towns, dead end career choices deceptively propped up by subsidized industries that suddenly implode, death of retirement accounts overstuffed with now bad stocks that could have been pruned years prior to avoid larger damage.

**The Strategy**

## Design Requirements

To continuously score high and improve on Inclusion, Freedom, Harm Management, government will have to:

1. Respond far faster to new threats, sources of harm, and new types of risk discovered in a system.
2. Acknowledge that every government intervention is a cost to freedom, and inclusion and at a minimum costs money.  The harm and/or risk prevented must far outweigh the cost to freedom and inclusion.
3. Evolve at the speed of software.  Most forms of technology now follow the pace of change of software. For example, Tesla Motors releases software improvements wirelessly to all Tesla cars .
4. Filter for quality policy:
    a. Make a sim at least as quality at the Sims 2.  That should be open source by now.
        i. Will prevent laws crafted by humans that are logically or physically impossible.
        ii. Will help policy makers to have
2. Make an agent based simulation. Establish in a simulation, preferably agent based simulation where some of the agents are actual humans interacting with the simulated world.

# Platform: Libertarian as possible,  Results matter more than Ideology;  If a non-Libertarian solution works 10x better than a Libertarian solution then go with the non-Libertarian solution.

## Qualitatively Simplify Expectations of Government

1. Don't manage culture, specific types of expression.
2. Don't manage morality, limit government intervention to focus on promoting Inclusion, Freedom, preventing Harm.

## Global Fair Trade Agreement:

Global minimum wage: an relative number based on the the cost of

1. 5 cubic meters of drinking water a month,
2. 20 kilograms of food,
3. 5 gb of data transmission a month
4. 18 sq meters of living space within 10 kilometers of the job.
5. These numbers will be determined annually by actual rates charged to the poorest 10% of a region, determined by publically available data. not some bullshit number made up by a government agency. r

Only products and services produced at the legally set

Make a Game of it. Yeah that's the next step.

### Also try a some super basic loan program

The only consequence for delayed or nonpayment is you can't get any further loans.
Get rid of all job based benefits, get rid of all the veterans benefits.

## High Value Non-Libertarian Policy

Here are Some Laws That Aren't Libertarian but are 10x better than a Zero government involvement solution.

1. Upgrade the 2nd Amendment right to bear arms from a right to a mandatory responsibility. Things that fall under the world of insurance will be the biggest category of reasonable violations of Liberterian ideology. R
2. Multinational gentrification and imminent domain.

# : a.k.a "Darian Hickman for President."

1. Turn Government as much into a software including especially the type and severity of government intervention.
2. c

## Government Philosophy

The current US system is like spaghetti code developed over 250 years of ever expanding goals and expectations of government. One system coherently designed for present day and the issues facing the nation over the next 20 years can create a dramatically more effective and efficient government that dramatically more people enjoy living under.

End debates on personal responsibility vs state responsibility and move to data driven determination of which level of solution gets the most effective solution to

## Abortion Reform

Between 0 and 20 weeks of pregnancy the mother of the child has full authority over the life of her child. After 20 weeks the only legitimate reason to abort is to protect the life of the mother. No laws managing the sub cases: rape, incest, gender-based abortions, partial birth, etc need to be created. The same timeline will be used for criminal and civil cases. E.g. If someone murders a pregnant woman prior to 20 weeks then it's a single homicide. At 20 weeks, it's double homicide.

## Explicitly out of Scope:

Governments don't determine people or actions are inherently bad or sinful. Governments establish through

Massive Gains in speed by eliminating responsibilities:
E.g. If we get rid of ban on prostitution then no government needs to consume resources managing or

9. Taxes and What it Means
    a. Taxation can largely be broken down into a
    b. Fee to offset a social cost.
    c. Mandatory Charity - a lot of your money is given to people in theory to benefit their lives.
    d. Create measuring
    e. Mandatory Services
    f. Mandatory Savings
    g. Mandatory Investing
    h. Corp bailouts
10. Look up U.S. Abortion Rates
    a. See if the upsurge in contraception is having impact on abortion rate.
11. Already generated relevants score cards:
    a. The Good Country Index : how much good a country generates beyond it's own borders.
    b. UN Sustainability Development Goals.
    c. Doing Business | ease of starting and conducting a business per country
12. Preventing Harm vs. Managing Morality.
    a. Upgrading the pursuit of Justice.
    b. Preventing Harm. Jon Stuart Mill On Liberty.
    c. What about public nudity? Why are there laws about that?
        i. If government explicitly didn't prohibit it or discourage it then how would private sector community discourage the behavior.
    d. The Righteous Mind by Jonathan Haidt. Lots of things don't harm others but are taboo.
        i. Sex with dead animals.
        ii. Public Nudity.
        iii. Public nuisance laws.
            1.
    e. (needs expansion and quote and reference)
13. Human Nature
    a. Human Nature is 98% chimpanzee, primate. All those things like aggression, establishing dominance, shouldn't be suppressed but rather leveraged. UFC, rough sex, organized sports, there's plenty of legitimate outlets for aggression.
    b. Not sure what having sex with kids is about. Is that something in chimpanzee behavior?
14. Read later: https://techcrunch.com/2016/10/05/creating-a-new-architecture-of-government-through-tech-and-innovation/
15. VIP. When should government interfere with personal decisions for Very Important Persons
16. Parenting Responsibilities. How much should government intervene on personal decisions on behalf of children welfare. ?

Kilmer, Beau, Susan S. Everingham, Jonathan P. Caulkins, Gregory Midgette, Rosalie Liccardo Pacula, Peter H. Reuter, Rachel M. Burns, Bing Han and Russell Lundberg. How Big Is the U.S. Market for Illegal Drugs?. Santa Monica, CA: RAND Corporation, 2014. http://www.rand.org/pubs/research_briefs/RB9770.html.

**Unanswered Questions**

1. Would the Disruption Fund be more effective if it was specific to the employer?
2. What is the metric unit of inclusion?
    a. https://www.i4cp.com/trendwatchers/2010/07/14/inclusion-measurement-tracking-the-intangible
    b. http://digitalcommons.ilr.cornell.edu/cgi/viewcontent.cgi?article=1063&context=student
3. How does right to have kids and raise children connect with the limitation of preventing harm?
4. The only reason to limit a freedom is to prevent harm?
5. If the government created a rudimentary venture capital fund could open source wisdom make the Fund generate massive gains for folks?
6. How can governments make it easier to form customer owned insurance groups
    a. https://en.wikipedia.org/wiki/Mutual_insurance
7. What does portfolio diversification look like when Disruption and Globalization typically generate a few massive winners and a long tail of losers?
8. Is it true that food and energy are usually the first victims of hyper-inflation when a currency becomes devalued.
9. So if I take someone's kid, I could very well not be harming the parent or harming the child. The child isn't the Parent's property so it isn't stealing. If the child ends up in better circumstances
10. What are parent's rights? It's one of the most important relationships of any person's life, so a Parent could be deeply grieved.
11. Are there simpler ways to measure inclusion besides keeping detailed stats on race, ethnicity, gender, sexual orientation, looks?
12. **Harm:**
    a. Consent:
        i. What about permitted harm like:
            1. People stabbing your skin with a tattoo gun.
            2. Rough sex.
            3. Contact sports.
        ii. How to clearly and objectively define emotional harm?
        iii. Certain actions are banned to even consent to:
            1. Selling an organ or body part.
            2. Selling sex.
            3. It isn't emotional harm if it doesn't bother anyone.
        iv. Verbal assault.
        v. Rape: the only difference between rape and sex is consent.
            1. Physiologically the same thing happened.
            2. Emotions. Someone felt violated.
        vi. Tattoos: the only difference between a tattoo and getting stabbed 1000 times with a needle is consent.
        vii. Martial arts: the only difference between organized fight and physical assault is consent.
        viii. Slavery: the only difference between unpaid internship and slavery is consent.
        ix. Murder: the only difference between assisted suicide and murder is consent.
        x. Wow consent matters a lot in distinguishing between harm and freedom.
    b. Where does responsibility for spreading sexual disease begin and end?
        i. Does it matter if the infected knows about their condition?
        ii. Can adults consent to infected sex?
    c. Ageism:
        i. Even in the most advanced democracies where all genders, ethnicities are included in the same set of rights, you still get certain rights based on age.
            1. Right to consent to sex: 16.
            2. Right to vote: 18.
            3. Right to own pistols: 18
            4. Right to serve in military: 18
            5. Right to enter into contracts: 13
            6. Right to view violent or sexual content: 13
            7. Right to use drugs like alcohol and tobacco and marijuana: 21
            8. Right to life: 0.
            9. Right to collect social security: 65 or 69.
    d. This means the difference between some freedoms and harm is consent. In the vast majority of daily events, consent is implied, or lack of consent is implied from context.

        i. A guy grabbing a female jogger and having sex with her, almost entirely implies lack of consent.
        ii. A girl tackling someone in the middle of a cafeteria is almost entirely implies lack of consent.
    e.

**Brainstorm of unifying themes or unifying questions.**

1. What does government look like when there's no such thing as a human expert, but everthing has been delegated to Expert System AI?
2. How can we design Government to be exponentially more affordable, more responsive, more anti-fragile?
3. How can we turn Governance into an information technology?
4. Reinventing City and National Governance for Robust Futures. How can we redesign Government increasingly unpredictable futures?
5. What KPI's should govern policy at the highest level?
    a. Set measurable objectives that improve every year.
    b. Number of people making more than $2000 in passive income
6. How can we simplify 250 of years of lawmaking into a coherent and fair form?
7. How can we turn variables traditionally managed by humans into markets meant by humans and machines?
8. What is the spectrum of responsibilities between individual all the way to state?
    a. How can we shift more of the solution making to the individual or the smallest group necessary to solve a problem?
    b. When the burden of solution making becomes too intense for the individual what for-profit companies will offer simplification?
9. How can we make policy easy for AI to intepret in statments that it can check for logical consistency.
10. How can we automate efficiences like ending the printing of nickels and pennies. ?

**Curated Outline**

1. Intro: The Future is increasingly unpredictable. Government is unprepared.
    a. The Black Swan
    b. The Singularity
    c. Example drugs getting invented sooner than government can ban them.
    d. will have legislate drugs, that
2. Extreme market fluctuations will increase.
    a. The Black Swan.
    b. Eg Flash crashes.
    c. Eg. 100 year old bank is gone.
    d. Traditional Agencies
3. Shifts in geopolitics have increased and will continue to increase.
    a. The End of Power .
4. Most of the 7.4 Billion people will suffer under governments unprepared for the change.
    a. Trump's election and Brexit shows the underlying discontent.
    b. Climate Change consequences already increasing conflict in Middle East and carbon reduction won't solve anything for another 50 years.
    c. Dramatic increase in government happens at every crisis and increases brittleness.
5. Extremistan usually produces a few big winners and a multitude of losers.
6. Government can be redesigned to keep a quality of life going for the 7.4 Billion
7. Useful Paradigms to Consider in a Framework/Design/Solution/Policy
    a. Order of Solution.
    b. Spectrum of Incentives
8. Define the Ideal Government.
    a. Fundamental Financial Innovations
    b. How Government handles current Political Issues.

9. Map a Path from Current to Ideal
10. Government that helps people prepare for extremely uncertain future and further yet enjoy the future.
11. Conclusion: The same Innovation that stresses our Government will produce the solutions to highly adaptible government. The pending crisis in Governance is a quality opportunity to upgrade Governance into an information technology that can keep pace with with the needs of the global population.

# Sources

http://www.usgovernmentspending.com/federal_budget_estimate_vs_actual

# Results

If an ideology doesn't generate steady improvement in the quality of life for the vast majority of people then change the ideology. Results supercedes coherent theory, respected tradition, principle, or strict adherence to morality.

# Political Wishlist

1. Find the person who campaigned for the service to help people on the roadside during rush hour and promote that person for creating such effective policy.
2. Pass laws that incentivize manufacturers to create reusable packaging.
3. Example: Refillable milk jugs. Packaging at a retail outlet that has can be redeemed for credit at next purchase. Go buy toy at Bestbuy. Unpack toy. On next trip to Bestbuy return packaging for credit towards next purchase.
4. Charge an excess tax after using a certain amount of gasoline to help keep commodities prices down
5. Create an app for people upvoting who should get trained and armed to protect.

# Universal Charity

**Concept and Design**

The only requirement is that the recipient is a human.
regardless of nationality, criminal record, place of residence.
Recipients have no restrictions on what they spend and how they spend.
All documentation is public so if any government cares they can pull from the public feed.

All donations are public knowledge and distributions are public knowledge. If you need anonymity then will have to donate through somebody else.
It is deliberately extremely simple by design. There is no inheritance. There is no gifting.
Everyone / anyone on the planet can have an account therefore no sorting thru tax returns, passports, or any govt document.
Anyone /everyone can contribute.
Corporations can't be members, no business entities, just humans.
Fraud is nearly impossible because everyone is eligible. So the only fraud to mitigate is multiple accounts.

When a person dies their account gets regifted to all other members.

You have to login once every six months to confirm you are still alive. You can

Batch distributions every quarter when balances hit $100 USD equivalent. So if signing up goes viral

The most interesting problem is how authenticate humans.
Experiment: social authentication. People become something like notaries and authenticate that other people are real.
Should be way lower bandwidth consumption than Facebook.

What happens if somebody gives illegally gained money?

Really simple math:
Total money donated every quarter / by every account.

Pure volunteer redistribution of wealth.

Requirements must be human. Must sign yourself up. Can add a method of payment later. The simplest online charity ever.
Give globally instantly without bias. No paper. Only email, sms based communication. Missing authentication 3 times means your account gets reabsorbed into general fund.

**Implementation**

Google spreadsheets as database w memcache and Google app engine as platform. Python.
Some bitcoin thing.

Create a hash from account #i

**The Big Questions I want Answered:**

- What is a government supposed to accomplish?
- How does government add more value to the lives of the governed than anarchy?
- Is there such a thing as government that isn't a necessary evil?
- How do we know when Government is operating well or operating poorly?
- What is the simplest government design that can accomplish the goals of Government?
- Is there a way to design Government so that it never ruins people's lives?
- What Key Performance Indicators do we need to track continually to let people know their government is operational.
- Can we design government so there isn't artificial barrier between government and business?
    - Can we incorporate people feedback without making business owners fearful of losing control of their investment?
    -

The biggest possible government is everyone on Earth is in the Government and everyone is governed by the Government.
The smallest government is no government. Everyone fends for themselves.

**Things we Currently Expect from Government**

We expect Government to clearly define who is governed by the government. Governments usually break people up into citizens, resident aliens, foreigners. All have some basic rights given by Government. The closer you are to Citizen the more rights and representation you have.

**Highest level Principles**

1. Great Government is Fair and Just.
2. Great Government treats people as Equally as Possible.
3. Great Government follows it's own rules.
4. Great Government maximizes Freedom of expression, religion, culture as much as possible.
5. Great Government interferes with the lives of the people as little as possible.
6. Great Government is as voluntary as possible. If people want to leave to go live under a better Government than Great Government will.
7. Great Government can work in Offline and Online. Offline means a city can function at a basic level even when there's a crisis that severs it from the rest of the world. Online means Internaitional finance and other systems working like normal.

**Further Thoughts on Great Government**

- If you can come up with a government that manages shared water resources really well you'll probably manage all other shared resources else well.
- There will be no unfunded entitlements of any kind.
- No Ponzi schemes like modern Social Security in America.
- By constitution no one will pay taxes higher than 20%. Anything higher than 20% is theft by government. (Joseph Principle. Even when Joseph helped Egypt become the most dominant economic power in the Middle

East, the pharoah only charged ⅕ of crops for families desparate for refuge from famine. )

- **Any law at the National level has to justify why it can't be solved by a smaller scope government like City or Region**
- Government should create the maximum unity with the minimum amount of needed uniformity.
- The Government should follow the principle of Minimal Effective Dose (MED) in designing punishments, fines, market regulations.
- Where possible, use market forces to acheive goals. For example cap-and-trade policies to limit pollution.
- All projects of the government have to execute with business discipline meaning
- The pool of candidate leaders should be picked with very clear agreed upon standards.
- The more money you get from the government whether it's welfare, tax breaks, subsidized interest loans the more the government tells you what to do with your money.
- Merit based Health Care: If you get state subsidized healthcare you have to earn it by taking of your health.
- All financial transactions have to be done via mobile phone by default. You can offer
- No debt uncollatarized debt can last more than 7 years. Any debt has to clearly define how it it will be converted into equity if the borrower stops paying on debt.

### Strategy for Picking Leaders.

1. Create a list of requirements that can be measured objectively. For example
    a. Has to have run a business with at least 4 profitable years.
    b. Demonstrated through 3 years of volunteering that they care about the people in general.
    c. Knows at least basic principles of warfare and security. Through at least simulation.
    d. Understands all the design principles that they are to protect in running.
    e. Must demonstrate competency at least via game simulations.
2. Then use some phenomenon of nature to randomly pick the leadership lottery. Among a pool of 1,000 candidates that are endorsed by 10,000 people or 1% of the population.

### Checks and Balances

The more you've invested into the Country the more voice you get over it's operation. Should we have birthrights?
So people who dodge paying taxes or otherwise investing in the country screw themselves over by getting less voice in the government.
Put passports up for sale. You can buy a passport for $10,000 and that can be a starting investment for immigrants.
Getting citizenship is easy because all social welfare programs are based on what you put into the system. So there's no mooching.
Make actual numbers votable.
Investing in the Commonweath via taxes should be separated from the purchasing of government services whereever possible.
The more you've done for the Nation, the more say you get. So inputs count as paying taxes, donating time and money to charities.
The more you've invested into the Country the more voice you get over it's operation. Creating sources of income to

### Unit of Currency. Central Venture Capital instead of Central Debt.

Flaw with fiat currency. Using debt to expand the money supply works if the collateral of the debt is good. However we discovered in 2008 how wrong we can be about the underlying value of collateral for money. So instead of having debt, instead of a central bank. Have a central Venture Capital fund. All assets can be represented by shares. So anyone can buy a piece of land, issue a 1000 shares that represent ownership 1/1000 of the land. Whoever has 51% has the controlling share. So currency isn't perfectly exchangeable but there's monetary manipulation.

Instead of creating laws to punish corruption, design systems where corruption isn't possible. Example: ESeva in Andra Pradesh, India.

Prohibited markets should be kept to a minimum.

### Water Practices

I felt God was emphasizing water in the importance of government.

Could we make water the unit of currency? What would that mean. There's physical water. So any it will be represented by
So to avoid fiat currency. we have

### Experiments with Tax System

1. Instead of wealthy people spending lots of money to protect, expand their business, let them vote it out based on their taxes. Make one branch of congress the House of Taxpayers where votes are based on amount contributed to government in taxes.
2. Set the tax rate on wages, cap gains, dividends, interest, rent to 20% max.
3. Above an income threshold of 10x minimum wage, also have a 10% mandatory charity tax. It's like taxes but the donors get to pick the social cause or project they donate to and they can have things named after them and brag out it etc.
4. Give everyone a Bulletproof Stream Fund with a cap. Like an IRA but the dividends, interest are always available.

### Experiments with Education

1. No public education. But provide vouchers for everyone regardless of income to pursue education especially the first 8 years.
2. Make sure education policy is engineered to help individuals discover their strengths and figure out how to add value to other people's lives thru those strengths. (Finland might be the best example).

### The Seven Habits of Highly Effective Governments

1. Protect freedom and every individuals ability to add value to society.
2. Protect investors right to own property including real estate, commodities.
3. Protect innovation and the cycle of creative destruction.
4. Encourage big business and big labor to invest in creative destruction instead of protecting market.
5. Don't use jails as slave labor.

Proverbs:
If you don't provide well for the people of your nation then you aren't the government. You are a cartel that happens to print money and passports.

### Policy Design

Is there a policy design that leaves the overwhelming majority capable of defending themselves from crime and from government, and external invaders, and minimizes the number of innocent people killed by criminals and psychos?

If we increase government's power to filter out psychos and criminals from gun ownership can we trust the government to not abuse that power. History shows no.

A pool in the backyard is 100 times more likely to kill a child than a gun in the house. link below
Banning guns doesn't make people safer, it makes them more at risk.
If more sane people carried weapons then psychos could be taken down faster. Psychos usually pick super vulnerable targets, not police stations or military basses. So stop leaving schools so vulnerable.

Regardless of effectiveness to deter intruders, guns matter for the express reason in the US Constitution, to protect ourselves from our own government.

All humans alive today are benefiting directly or indirectly from somebody who is willing to kill on their behalf.

Questions:
Are there any nations where it's mandatory to own and learn how to use a gun?
Could you hijack a plane if everyone on the plane was carrying a gun?

Personal Responsibility vs Government Responsbility.

Best design is Government design that makes it easy to take Personal Responsibility.

http://scienceblogs.com/deltoid/2001/07/27/levittpoolsvsguns/

Feedback Loops to Influence Government to Improve

## Intro

In a fit of inspiration I started to design a great government and quickly realized I don't know have any clear definition of what great is. So I have to create a scorecard for government before designing a government. Also have to figure out what goals government or design an accurate meaningful scorecard. Then I wondered what is the already existing scorecard of government. How are people already scoring governments but not calling it a scorecard? The following observations ensue from that observation:

If you don't have the following then you don't have a government:

1. Capacity to enforce laws and boundaries.
2. People.
3. ? The consent of the governed? Nice to Have; but many governments still exist

Realms of Government:
Justice system.
Physical Enforcement of Laws and Boundaries

## People vote for your government by moving to where you govern.

How do you know when you have a great government?
People actually want to move to your country, city, or locale.

California is an awesome state but if you don't like the taxes you can move to Florida and stay in warm weather with no income tax and reasonable sales tax.

## Voters actually vote in polls amongst multiple candidates.

Saddam got 100% of the vote in Iraq to remain President. This is not likely a great election or a sign of a great government.

## People invest in land and business opportunities in your country.

This Feedback loop is a great additon to People moving to live under your government. If you had free healthcare for all no justification necessary then people with ailments would be flooding your state however

## The majority of people don't bother cheating on their taxes.

Great conversation with Greek citizen while travelling in DR Congo.

## People feel safe living in government.

This one is redundant from people wanting to move to company.

## People create more value than they consume.

People can pool resources into a business and sell things to customers for more than it cost to produce.

Is there such a thing as a great government where people don't choose to live there and investors don't choose to invest there?
By definition no.

So the definition of great government is People choose to live there and Investors choose invest there and workers choose to work there.

The more number of people who choose to live under a government the better the government.
The more strongly people choose to live under a government the better the government.
The more investors choose to invest under a government the better the government.
The more capital per investor that the government invests under a government the better.
The more workers choose to work under a governemnt the better the government.
? The more volunteers choose to volunteer - that's just working without pay, for some other type of gain. ?
? The more parents choose to raise kids under your government the better. ?

If we copied Netflix or Zappos idea and offered everyone in the country $1000 dollars to leave a country how many would take the $1000 and leave the country. I'm guessing the stated number will be way higher than the actual number.

What percent of US smokes? 20%

### Design Principles of Great Government

Goals of Great Government.

### Traditional Feedback Loops of Great Government

Traditional Feedback Loops of Great Government
Intro
People vote for your government by moving to where you govern.
Voters actually vote in polls amongst multiple candidates.
People invest in land and business opportunities in your country.
The majority of people don't bother cheating on their taxes.
People feel safe living in government.
People create more value than they consume.

### Goals of Great Government.

- Maximize freedom of people everywhere. When there's conflict between two people's freedom prioritize those who contribute to the government.
- Highest priority: protect people's access to fundamental needs: food, shelter, clothing, clean water.
- Second highest priority: manage markets with fairness, consistency and keep the market attractive to investors, producers and consumers.
- Use free markets to solve problems first before government mandate is used.
- Make it easy for Heaven to invade Earth as spelled out in the Lord's Prayer.
- Protect everyone's ability to add value to other people's lives. Make sure they
- No More figuring out who is the government. Whoever gets results for the people is the government.

## Example Federal Budget fromr 2015

Estimates for FY 2015 Federal Outlays in US Budgets

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | Estimate in FY11 Budget | Estimate in FY12 Budget | Estimate in FY13 Budget | Estimate in FY14 Budget | Estimate in FY15 Budget | Estimate in FY16 Budget | Actual 2015 |
| Health Care | 1,088.30 | 1,129.90 | 1,116.50 | 1,058.00 | 1,044.50 | 1,017.70 | 1,018.60 |
| Education | 146.1 | 123.4 | 120.5 | 119.4 | 130.7 | 149 | 132.5 |
| Welfare | 386.2 | 371.2 | 391 | 384.6 | 385.8 | 375.9 | 366.5 |
| Pensions | 961.3 | 958 | 985 | 980.2 | 969.7 | 959 | 959.1 |
| Defense | 900.7 | 878.5 | 777.7 | 823.2 | 839.9 | 813.9 | 799.7 |
| Protection | 39.2 | 39.2 | 36.8 | 36.5 | 34.1 | 35.5 | 32.4 |
